

Transport Module – Instructions

When a user executes the jar file, they will be prompted with a menu of actions. Each action is numbered, so that the user can enter the number of the desired action in order to choose it.

There are three main actions that a user can choose: Schedule a new shipment, Browse past shipments documents and their relative destinations documents, and Exit.

The system is preloaded with 4 Areas, each area has numerous sites to choose from. It also has 2 drivers and 2 trucks with different License types and maximum weight respectively. And in addition, an example shipment document is also available with the loading of the system.
